

Screenshot Capture Procedure

Document Information

Document Title: Screenshot Capture Procedure

Project: Organize a Professional Digital Filing System

Document Type: Standard Operating Procedure (SOP)

Version: 1.0

Prepared By: Omondi Mbara

Date: 5 July 2026

1. Purpose

The purpose of this procedure is to establish a consistent method for capturing, organizing, naming, and storing screenshots used to document the Professional Digital Filing System. Properly captured screenshots provide visual evidence of the completed project and enhance project documentation, GitHub repositories, reports, and presentations.

2. Scope

This procedure applies to all screenshots captured during the planning, implementation, testing, and documentation of the Professional Digital Filing System project.

Screenshots may include:

- Folder structure
- Documentation folders
- Sample files
- File Explorer windows
- Backup folders
- Archive folders
- GitHub repository
- LinkedIn project post
- Windows File Explorer settings

- Search results
-

3. Responsibilities

The user is responsible for:

- Capturing clear screenshots.
 - Ensuring screenshots are relevant.
 - Removing unnecessary personal information before sharing.
 - Saving screenshots using the approved naming convention.
 - Storing screenshots in the designated Screenshots folder.
-

4. Screenshot Storage Location

All screenshots should be stored in:

Professional Digital Filing System

└─ 04 Projects

 └─ Organize a Professional Digital Filing System

 └─ Screenshots

If many screenshots are captured, organize them into subfolders:

Screenshots

```
|
├─ Folder Structure
├─ Documentation
├─ Procedures
├─ GitHub
├─ LinkedIn
├─ Backup
├─ Archive
└─ Final Project
```

5. Screenshot Procedure

Step 1: Prepare the Screen

Before taking a screenshot:

- Close unnecessary applications.
 - Remove unrelated windows.
 - Arrange the window neatly.
 - Ensure the required information is visible.
 - Hide personal or confidential information if the screenshots will be shared publicly.
-

Step 2: Capture the Screenshot

Use one of the following methods:

Method A – Snipping Tool

1. Open **Snipping Tool**.
 2. Click **New**.
 3. Select the area to capture.
 4. Review the image.
 5. Save the screenshot.
-

Method B – Windows + Shift + S

Press:

Windows + Shift + S

Select:

- Rectangular Snip
- Freeform Snip
- Window Snip
- Full-screen Snip

The screenshot is copied to the clipboard. Open an application such as Paint or Snipping Tool and save it.

Method C – Print Screen

Press:

PrtScn

or

`Alt + PrtScn`

Paste the image into Paint, Microsoft Word, or another application, then save it.

Method D – Windows + PrtScn

Press:

`Windows + PrtScn`

Windows automatically saves the screenshot in:

Pictures
└─ Screenshots

Move the screenshot to the project's **Screenshots** folder after reviewing it.

Step 3: Review the Screenshot

Confirm that:

- The image is clear.
- All required information is visible.
- No confidential information is displayed.
- The screenshot is properly cropped.

If necessary, capture the screenshot again.

Step 4: Name the Screenshot

Use descriptive filenames.

Examples:

01 - Main Folder Structure.png
02 - Documentation Folder.png
03 - Reports Folder.png
04 - File Naming Convention Guide.png
05 - GitHub Repository Home.png

Maintain sequential numbering for easy reference.

Step 5: Save the Screenshot

Navigate to:

```
Professional Digital Filing System
└─ 04 Projects
    └─ Organize a Professional Digital Filing System
        └─ Screenshots
```

Click **Save**.

Step 6: Verify the Screenshot

Confirm that:

- The screenshot was saved successfully.
 - The filename is correct.
 - The image opens properly.
 - The image is stored in the correct folder.
-

6. Recommended Screenshots for This Project

Capture screenshots of:

- Main folder structure.
- Administration folder.
- Finance folder.
- Projects folder.
- Documentation folder.
- Reports folder.
- Procedures folder.
- Guides folder.
- References folder.
- Templates folder.
- Sample files.

- Archive folder.
 - Backup folder.
 - Naming convention document.
 - GitHub repository.
 - Repository file structure.
 - README page.
 - LinkedIn project post.
 - Final project folder.
-

7. Image Format

Recommended formats:

Format	Recommended Use
PNG	Preferred for documentation because it preserves image quality.
JPG	Suitable for general images where smaller file size is preferred.

Use **PNG** whenever possible.

8. Best Practices

- Capture only relevant information.
 - Keep screenshots organized.
 - Use descriptive filenames.
 - Number screenshots sequentially.
 - Crop unnecessary areas.
 - Maintain consistent image quality.
 - Remove personal information before publishing.
 - Review screenshots before uploading to GitHub.
-

9. Common Mistakes to Avoid

- Saving screenshots with default names such as `Screenshot (1).png`.
- Capturing cluttered screens.
- Including unrelated windows.
- Publishing screenshots containing personal or confidential information.
- Storing screenshots outside the project folder.

10. Related Documents

- Document Filing Procedure
- Procedure for Saving Files
- File Retrieval Procedure
- File Backup and Recovery Procedure
- Archive Management Procedure
- Duplicate File Management Procedure
- File Permission Management Procedure
- Folder Structure Guide
- GitHub Publishing Procedure
- User Guide

11. Revision History

Version	Date	Description
1.0	5 July 2026	Initial release.

12. Conclusion

Capturing and organizing screenshots is an important part of documenting the Professional Digital Filing System. Following this procedure ensures that screenshots are clear, consistently named, and stored in the correct location. Well-organized screenshots enhance project reports, presentations, GitHub repositories, and LinkedIn posts by providing visual evidence of the project's implementation and demonstrating professional documentation practices.
