

File Backup and Recovery Procedure

Document Information

Document Title: File Backup and Recovery Procedure

Project: Organize a Professional Digital Filing System

Document Type: Standard Operating Procedure (SOP)

Version: 1.0

Prepared By: Omondi Mbara

Date: 5 July 2026

1. Purpose

The purpose of this procedure is to establish a consistent method for backing up and recovering digital files within the Professional Digital Filing System. Regular backups protect valuable information from accidental deletion, hardware failure, malware, corruption, or other unexpected events. This procedure also provides guidance for restoring files when they are lost or damaged.

2. Scope

This procedure applies to all files stored in the Professional Digital Filing System, including:

- Project documents
 - School documents
 - Financial records
 - Personal files
 - Templates
 - Presentations
 - Images
 - Reports
 - Books and manuscripts
 - Certificates
-

3. Responsibilities

The user is responsible for:

- Performing scheduled backups.
 - Verifying that backups are completed successfully.
 - Keeping backup storage secure.
 - Testing recovery procedures periodically.
 - Maintaining multiple backup copies when appropriate.
-

4. Backup Strategy

To reduce the risk of data loss, maintain multiple copies of important files.

Recommended Backup Locations

- Primary computer (working copy)
- External hard drive or USB drive
- Cloud storage service (optional)

This provides redundancy if one storage location becomes unavailable.

5. Backup Frequency

File Type	Recommended Frequency
Project documents	After significant changes or at the end of each work session
School assignments	After each editing session
Financial records	Weekly
Personal documents	Monthly or after important updates
Entire filing system	Weekly or before major system changes

6. Backup Procedure

Step 1: Close Open Files

Before starting the backup:

- Save all changes.
 - Close open applications to prevent incomplete copies.
-

Step 2: Connect the Backup Device

If using external storage:

- Connect the USB flash drive or external hard drive.
- Confirm that the device is recognized by the computer.

If using cloud storage:

- Ensure synchronization is complete before proceeding.
-

Step 3: Locate the Filing System

Open **File Explorer** and navigate to:

Professional Digital Filing System

Step 4: Copy the Folder

Right-click the **Professional Digital Filing System** folder and select **Copy**.

Step 5: Paste to the Backup Location

Open the backup destination and select **Paste**.

Example:

```
External Drive (E:)
├── Backups
│   └── Professional Digital Filing System
```

Allow the copy process to complete before disconnecting the backup device.

Step 6: Verify the Backup

Confirm that:

- All folders were copied.
- Important files are present.
- Folder structure is unchanged.
- Files open successfully.

Step 7: Label the Backup

Include the backup date in the folder name.

Example:

Professional Digital Filing System Backup - 2026-07-05

This helps identify the most recent backup.

7. Recovery Procedure

Step 1: Identify the Missing or Damaged File

Determine:

- File name
 - Original location
 - Most recent backup date
-

Step 2: Open the Backup

Navigate to the backup folder.

Example:

External Drive (E:)

Step 3: Locate the File

Browse through the backup folder or use File Explorer's search feature.

Step 4: Copy the File

Right-click the required file and select **Copy**.

Step 5: Restore the File

Navigate to its original location in the Professional Digital Filing System.

Right-click and select **Paste**.

If a file with the same name already exists, compare the versions before replacing it.

Step 6: Verify the Recovery

Confirm that:

- The file opens correctly.
 - It is stored in the correct folder.
 - No information is missing.
-

8. Backup Verification Checklist

After each backup, verify the following:

- All folders were copied.
- Backup completed without errors.
- Folder structure matches the original.
- Important documents are accessible.

- Backup device is functioning correctly.
-

9. Best Practices

- Perform backups regularly.
 - Keep at least two backup copies.
 - Store one backup in a different physical location if possible.
 - Label backups with the creation date.
 - Test recovery periodically.
 - Keep backup devices free from malware.
 - Update backups after major changes.
-

10. Common Mistakes to Avoid

- Waiting too long between backups.
 - Disconnecting a storage device before copying finishes.
 - Overwriting the only backup copy.
 - Assuming backups completed without verification.
 - Forgetting to back up newly created files.
-

11. Related Documents

- Document Filing Procedure
 - Procedure for Saving Files
 - File Retrieval Procedure
 - Archive Management Procedure
 - File Naming Convention Guide
 - Folder Structure Guide
 - User Guide
-

12. Revision History

Version	Date	Description
1.0	5 July 2026	Initial release.

13. Conclusion

A reliable backup and recovery process is essential for protecting digital information. By following this procedure, users can minimize the risk of data loss and restore important documents quickly when needed. Regular backups, verification of backup integrity, and periodic recovery testing contribute to a secure and dependable digital filing system that supports personal, academic, and professional activities.
