1. Introduction

A glossary provides definitions of technical terms, concepts, abbreviations, and acronyms used throughout a project. It promotes consistency in documentation and ensures that readers have a common understanding of terminology used in the **Professional Digital Filing System**.

This glossary serves as a quick reference for users, reviewers, and stakeholders by explaining key terms related to digital records management, file organization, documentation, security, backups, and project management.

2. Purpose

The purpose of this document is to define the technical terms and commonly used expressions found throughout the **Professional Digital Filing System**. It supports effective communication, improves understanding, and ensures consistent use of terminology across all project documentation.

3. How to Use This Glossary

This glossary is arranged alphabetically.

For each term, the following information is provided:

- Term
- Definition
- Project relevance (where applicable)

Readers should refer to this glossary whenever they encounter unfamiliar terminology within the project documentation.

4. Glossary of Terms

Term	Definition
Archive	A storage location used for preserving inactive or historical files that are no longer regularly used but must be retained.
Backup	A duplicate copy of data created to allow recovery if the original files are lost, damaged, or deleted.
Business Continuity	The ability to continue operations by recovering important files and information after an interruption.
Change Log	A document that records modifications made to project files or documentation over time.
Checklist	A structured list used to verify that required tasks or activities have been completed.
Cloud Storage	An online service used to store, synchronize, and access files over the internet.
Data Integrity	The accuracy, consistency, and reliability of information throughout its lifecycle.

Term	Definition
Digital Filing System	An organized method of storing and managing electronic documents using folders, file naming standards, and documentation procedures.
Document	A digital file containing written information such as reports, guides, procedures, or forms.
Document Management	The systematic creation, organization, storage, retrieval, and maintenance of electronic documents.
Duplicate File	An unnecessary copy of an existing file stored in one or more locations.
File	A digital item containing information such as text, images, spreadsheets, presentations, or other data.
File Extension	The suffix at the end of a file name that identifies its format, such as .docx, .pdf, or .xlsx.
File Naming Convention	A standardized method of naming files to improve organization and retrieval.
File Retrieval	The process of locating and accessing stored digital files efficiently.
Folder	A directory used to organize related files into logical groups.
Folder Structure	The hierarchical organization of folders within a digital filing system.
Git	A distributed version control system used to track changes in files and collaborate on projects.
GitHub	A cloud-based platform used for storing, managing, and sharing Git repositories.
Guide	A document providing detailed instructions or recommendations for completing specific tasks.
Hyperlink	A clickable reference that directs users to another document, webpage, or resource.
Metadata	Information that describes a file, including its name, size, author, creation date, and modification date.
PDF	Portable Document Format, a file format used to preserve document layout and formatting across devices.
Procedure	A documented sequence of steps for completing a task consistently.
Project Deliverable	A completed product, document, or output produced during the project.
Project Scope	The defined boundaries, activities, and deliverables included in the project.
Project Timeline	A schedule showing the planned sequence and duration of project activities.
Quality Assurance	A systematic process used to verify that project deliverables meet established standards.
Recovery	The process of restoring files from a backup following data loss or corruption.

Term	Definition
Reference Document	A document that provides supporting information, standards, or requirements for the project.
Repository	A centralized location used to store project files, documentation, and version history, particularly on GitHub.
Restore	The process of recovering backed-up files to their original or another designated location.
Risk Assessment	The process of identifying, analyzing, and evaluating potential project risks and determining mitigation strategies.
Screenshot	A captured image of a computer screen used as supporting evidence or documentation.
Security	Measures implemented to protect digital information from unauthorized access, loss, or damage.
Standard Operating Procedure (SOP)	A formal document that describes the approved method for performing a specific task.
Template	A preformatted document designed to provide consistency when creating new documents.
Troubleshooting	The systematic process of identifying, diagnosing, and resolving problems affecting a system or project.
User Guide	A document that provides instructions for users on how to operate or manage a system or process.
Version Control	The practice of managing changes to documents by maintaining different versions over time.
Workflow	The sequence of tasks followed to complete a specific process efficiently.

5. Common Abbreviations

Abbreviation	Meaning
DOCX	Microsoft Word Document
PDF	Portable Document Format
XLSX	Microsoft Excel Workbook
PPTX	Microsoft PowerPoint Presentation
JPG	Joint Photographic Experts Group Image
PNG	Portable Network Graphics
ZIP	Compressed Archive File
SOP	Standard Operating Procedure
QA	Quality Assurance
IT	Information Technology

Abbreviation	Meaning
PC	Personal Computer
USB	Universal Serial Bus
UPS	Uninterruptible Power Supply
URL	Uniform Resource Locator

6. Acronyms

Acronym	Full Meaning
QA	Quality Assurance
SOP	Standard Operating Procedure
IT	Information Technology
PDF	Portable Document Format
DOCX	Microsoft Word Open XML Document
XLSX	Microsoft Excel Open XML Workbook
PPTX	Microsoft PowerPoint Open XML Presentation
USB	Universal Serial Bus
UPS	Uninterruptible Power Supply
URL	Uniform Resource Locator
GUI	Graphical User Interface
OS	Operating System
RAM	Random Access Memory
SSD	Solid-State Drive
HDD	Hard Disk Drive

8. Conclusion

The **Glossary of Terms** provides a centralized reference for the terminology used throughout the **Professional Digital Filing System**. By defining technical terms, abbreviations, and acronyms, it promotes consistency, improves communication, and enhances the usability of project documentation.

Maintaining a standardized glossary supports better understanding among users, reviewers, and stakeholders while contributing to the professionalism and quality of the overall project. This document should be reviewed and updated whenever new terminology is introduced into the project documentation.
