

Digital Filing System Project Plan

Project Information

Project Title: Organize a Professional Digital Filing System

Project Type: Digital Document Management Project

Project Category: Information Management / Productivity / Portfolio Project

Prepared By: Washington Omondi Mbara

Version: 1.0

Project Status: Planning

Date: 5 July 2026

1. Executive Summary

The Digital Filing System Project aims to design and implement a structured, secure, and efficient digital filing system that enables users to store, retrieve, manage, and protect electronic documents effectively. The project focuses on establishing a logical folder hierarchy, implementing standardized file naming conventions, organizing documents into appropriate folders, reducing duplicate files, creating backup procedures, and documenting best practices for long-term maintenance.

The completed project will also serve as a professional portfolio project demonstrating practical document management and organizational skills through a well-documented GitHub repository.

2. Background

As digital documents continue to increase in number, managing files without a structured system often leads to:

- Lost documents
- Duplicate files
- Inconsistent file names
- Poor organization

- Slow document retrieval
- Reduced productivity

Implementing a professional digital filing system provides a standardized method for organizing files, improving accessibility, protecting information, and simplifying future maintenance.

3. Problem Statement

Many users save documents randomly on their Desktop, Downloads folder, or Documents folder without a structured filing system. This results in cluttered storage, wasted time searching for files, accidental duplication, and poor document security.

This project addresses these challenges by creating a professional digital filing system supported by clear documentation and standardized procedures.

4. Project Goal

To develop a professional, scalable, and user-friendly digital filing system that supports efficient document organization, retrieval, maintenance, and backup.

5. Project Objectives

General Objective

To organize digital documents using a professional filing system based on industry best practices.

Specific Objectives

- Design a logical folder hierarchy.
- Create standardized subfolders.
- Develop a file naming convention.
- Organize existing files into appropriate folders.
- Develop document filing procedures.
- Create file saving procedures.
- Develop backup procedures.

- Implement archive procedures.
 - Create duplicate file management procedures.
 - Develop file permission guidelines.
 - Prepare user documentation.
 - Capture screenshots of the completed filing system.
 - Publish the completed project on GitHub.
 - Share the completed project on LinkedIn.
-

6. Project Scope

Included

- Folder hierarchy creation
- Folder naming standards
- File naming standards
- File organization
- File backup strategy
- Archive management
- Duplicate file management
- Documentation
- GitHub repository
- LinkedIn publication

Excluded

- Enterprise document management systems
 - Multi-user server configuration
 - Cloud synchronization administration
 - Database-driven document storage
 - Network access management
-

7. Project Deliverables

The project will deliver:

- Professional folder structure
- Organized digital documents
- File naming convention
- Folder structure guide

- Filing procedures
 - Save file procedures
 - Backup procedures
 - Archive procedures
 - Duplicate file management guide
 - File permission guide
 - User guide
 - Project plan
 - Project report
 - Project presentation
 - Sample files
 - Templates
 - Screenshots
 - GitHub repository
 - LinkedIn project post
-

8. Resources Required

Hardware

- Laptop or Desktop Computer
- USB Flash Drive
- External Hard Drive (optional)

Software

- Windows 10 or Windows 11
- File Explorer
- Microsoft Word
- Microsoft Excel
- Microsoft PowerPoint
- Git
- GitHub Desktop (optional)
- Web browser

Online Services

- GitHub
 - LinkedIn
-

9. Project Activities

Phase	Activity
1	Project planning
2	Design folder structure
3	Create folders and subfolders
4	Develop file naming convention
5	Organize files
6	Develop documentation
7	Capture screenshots
8	Test the filing system
9	Create backups
10	Publish to GitHub
11	Share on LinkedIn

10. Timeline

Stage	Expected Outcome
Planning	Project objectives defined
Design	Folder hierarchy completed
Implementation	Files organized
Documentation	Guides and procedures completed
Testing	Filing system verified
Publication	GitHub repository published
Portfolio	LinkedIn project shared

11. Risk Assessment

Risk	Likelihood	Impact	Mitigation
Accidental file deletion	Medium	High	Maintain regular backups
Duplicate files	High	Medium	Follow duplicate management procedure
Inconsistent naming	Medium	Medium	Apply the naming convention consistently
Hardware failure	Low	High	Use cloud and external backups
Missing documentation	Low	Medium	Review documentation before publishing

12. Quality Assurance

The completed project will be evaluated using the following criteria:

- Folder structure is complete.
 - File names follow the established naming convention.
 - Files are stored in the correct folders.
 - Duplicate files are minimized.
 - Backup procedures are documented.
 - Screenshots clearly demonstrate the system.
 - Documentation is complete and accurate.
 - GitHub repository is organized and easy to navigate.
-

13. Success Criteria

The project will be considered successful if:

- Documents can be located quickly.
 - Folder organization is logical and scalable.
 - File naming is consistent.
 - Documentation is complete.
 - The repository is professionally organized.
 - The project can be understood by someone without additional explanation.
 - The project demonstrates practical digital document management skills.
-

14. Expected Benefits

Upon completion, the project will provide:

- Improved document organization.
- Faster file retrieval.
- Better document security.
- Reduced duplicate files.
- Improved backup management.
- Professional documentation.
- A reusable filing system for future work.
- A strong GitHub portfolio project.
- Evidence of practical organizational and documentation skills.

15. Conclusion

The Digital Filing System Project provides a structured solution for managing digital documents efficiently. Through the implementation of standardized folders, naming conventions, documented procedures, and backup strategies, the project establishes a reliable and scalable filing system suitable for personal, academic, and professional use. The completed GitHub repository will demonstrate practical skills in document organization, information management, technical documentation, and portfolio development.
